

## One stop shop for all your digital procurement

The bmobile service portfolio includes SaaS (Software as a Service); this being a software distribution model in which a third-party provider hosts applications and makes them available to customers via the Internet or private links.

bmobile introduces SaaS with the country's first and only locally developed application for digital tendering. e-Tender is an ICT driven innovative tool revolutionizing procurement management and strategic sourcing. The service is fully secure, since being successfully tested by Price Waterhouse Cooper.

The bmobile e-Tender application allows for the distribution of tenders and the administration of the procurement process digitally via the world wide web. The immediate benefits include reduced processing time, elimination of paper use, and electronic distribution/collection/record keeping with digital aggregation.

Take advantage of bmobile's experience, as currently there are over 3,800 vendors participating from over 100 countries worldwide, and over 700 Tenders issued to date with 2,000+ bid uploads

### CUSTOMER BENEFITS
